

**Exercise 1.** Write code to evaluate the following functions at the given values of  $x$

- At  $x = 2.9$ ,

$$f(x) = -(16x^2 - 24x + 5)e^{-x};$$

- At  $x = 0$ ,

$$f(x) = -[x - \sin(x)]e^{-x^2},$$

- At  $x = 5$ ,

$$f(x) = -\sum_{k=1}^{16} k \sin[(k+1)x + k].$$

**Exercise 2.** Write code to evaluate the following mathematical series

- For  $K=16$ , at  $x = e$

$$\sinh(x) \approx \sum_{k=0}^K \frac{x^{2k+1}}{(2k+1)!};$$

- For  $K = 16$ , at  $x = 0.5$

$$\operatorname{arcsinh}(x) \approx \sum_{k=0}^K \frac{(-1)^k (2k)! x^{2k+1}}{2^{2k} (k!)^2 (2k+1)};$$

- For  $K = 8$ , at  $x = 1/3$

$$\sqrt{\frac{1 - \sqrt{1-x}}{x}} \approx \sum_{k=0}^K \frac{(4k)!}{2^{4k} \sqrt{2} (2k)! (2k+1)!} x^k.$$
